Statement Yunshan Wu I sincerely hope that I can be accepted as one of the graduate students at your university, which is well known for its accomplished faculty and modern resources. It provides students from all over the world with a good chance to learn from different cultures. It is an ideal place for further study. Taking more advanced course in your university will surely enable me to realize my long--cherished dream of significantly improving people ' s living and working condition. I firmly believe that I can make great progress in my future study at your university. My childhood was spent in a coastal Chinese city Ningbo where my father worked in a laundry factory. While visiting his workroom, I often noticed that the working efficiency of the factory was terribly low. The operational techniques were backward and tedious due to lack of computerized automation. Realizing this during my senior year in high school, I said to myself that I would do my best to improve this situation in the near future. I successfully passed the National College Entrance Examination and enlisted in the Department of Electrical Engineering at Zhejiang University, which is the leading electrical engineering department in China. When I entered into Zhejiang University in 1998, I already stood out among the freshmen. My interests in computer-based technologies further intensified in the following college years. I became very curious at integrated circuits

and their applications. Knowing that computerized technologies were essential in all aspects of life, I studied hard on the coursework not only from my major of Applied Electronic Technology, but also from electives of Computer Science. However, I was not a bookworm. To broaden my vision and enrich my knowledge, I also chose courses in certain fields such as Signal amp ; physics, and these helped to strengthen his reasoning ability in electronic fields. Owing to his spirit of curiosity and preciseness, he always reasoned rules clearly with his own ability before accepting them. He not only showed his hardworking effort, but also demonstrated his extraordinary talents in this course. As for personal character, honesty and cooperativeness may be two main points in Mr. Wu. In fact, his optimistic and easy-going nature has made him a central figure among his classmates. Moreover, the easy-going and adaptive temperament plus his strong language ability would help him quickly adapt to a new environment. I am firmly convinced that Mr. Wu is sufficiently prepared for his proposed study and he will make significant contributions to your program. His application has my strongest recommendation. If more information about him is required, please do not hesitate to write to me directly. Yours

Sincerely
Guangzheng Ni Professor and Head of the Electromagnetic Institute
Department of Electrical Engineering
Zhejiang University
