E4\_BD\_95\_E8\_AE\_A9w\_c103\_644788.htm 1. 创建 wmii 的初始化配置文件 比如在 /home//config 中创建 wmii-config.sh 文件  
内容如下：（我的实例中是创建10个窗口，每个窗口可以初始化不同的配置）#!/bin/sh -f# Configure wmii# Configuration  
VariablesMODKEY=Mod1UP=kDOWN=jLEFT=hRIGHT=l#  
Colors tuples: " "WMII\_NORMCOLORS=#222222 #5FBF77  
#2A7F3FWMII\_FOCUSCOLORS=#ffffff #153F1F  
#2A7F3FWMII\_BACKGROUND=#333333WMII\_FONT=-\*-fixe  
d-medium-r-\*-\*13-\*-\*-\*-\*-\*set -- \$(echo  
\$WMII\_NORMCOLORS  
\$WMII\_FOCUSCOLORS)WMII\_MENU="dmenu -b -fn  
\$WMII\_FONT -nf \$1 -nb \$2 -sf \$4 -sb  
\$5"WMII\_9MENU="wmii9menu -font \$WMII\_FONT -nf \$1 -nb  
\$2 -sf \$4 -sb \$5 -br \$6"WMII\_TERM="x-terminal-emulator"#  
added by amuhong#for tag 1echo "\$WMII\_FOCUSCOLORS" "1" |  
wmiir create "/lbar/1"wmiir xwrite /ctl view "1"x-terminal-emulator  
amp.sleep 1#for tag 2echo "\$WMII\_FOCUSCOLORS" "2" | wmiir  
create "/lbar/2"wmiir xwrite /ctl view "2"x-terminal-emulator  
amp.sleep 1#for tag 4echo "\$WMII\_FOCUSCOLORS" "4" | wmiir  
create "/lbar/4"wmiir xwrite /ctl view "4"x-terminal-emulator  
amp.sleep 1#for tag 6cd /usr/src/borqs/deviceecho  
"\$WMII\_FOCUSCOLORS" "6" | wmiir create "/lbar/6"wmiir xwrite  
/ctl view "6"x-terminal-emulator amp.sleep 1#for tag 8cd

```
/home/derekecho "$WMII_FOCUSCOLORS" "8" | wmiir create  
"/lbar/8"wmiir xwrite /ctl view "8"x-terminal-emulator &sleep  
1#for tag 0cd /home/derekecho "$WMII_FOCUSCOLORS" "0" |  
wmiir create "/lbar/0"wmiir xwrite /ctl view "0"x-terminal-emulator  
&sleep 1
```

2. 修改 /home//.bashrc 在该配置文件中加入如下信息  
alias wmiiconf=sh /home//config/wmii-config.sh 然后重  
启shell来使能上面的修改

3. 使用 开机后进入wmii界面，首先通过 alt enter 打开第一个shell，然后输入命令 wmiiconf 就会快速产生10个shell对应到数字的0~9的十个tags
